Introduction-

Ambitious undergraduate specializing in Artificial Intelligence and Machine Learning, with a strong focus on developing intelligent systems to solve real-world problems. Possesses hands-on experience in building machine learning and deep learning models, particularly in computer vision applications such as disease detection and image classification.

Demonstrates a structured and analytical approach to problem-solving, with the ability to design, optimize, and enhance model performance. Actively engaged in continuous learning through practical projects and industry-recognized certifications, aligned with current technological trends.

Highly motivated to leverage AI for societal impact, especially in domains such as healthcare and agriculture. Brings a combination of technical knowledge, adaptability, and a results-driven mindset, with the ability to contribute effectively in collaborative and innovative environments.

Education

Bachelor of Technology

VIT Bhopal University

Bachelor of Technology (B.Tech) - Artificial Intelligence and Machine Learning
VIT Bhopal University 2023 - 2027

TECHNICAL SKILLS

Programming Languages

- Python
- C++

Core Concepts

- Data Structures and Algorithms
- Supervised Learning
- Model Evaluation Techniques

Artificial Intelligence & Machine Learning

- Machine Learning
- Deep Learning
- Computer Vision
- Convolutional Neural Networks (CNN)
- Model Optimization

Tools & Platforms

- MATLAB
- Microsoft Excel
- Streamlit

Generative AI

- Prompt Engineering
- Vertex AI
- Gemini
- Streamlit Application Development

Additional Skills

- Operating Systems: Windows, Linux
- Front-End Development (Basic)

Project-

Codelens

- AI-driven code review application that uses Python, Flask, and the Gemini API for analyzing source code and providing smart feedback on bugs, code quality, security, and best practices was developed.
- Syntax analysis, code optimization advice, and automated code review were implemented to increase code legibility, efficiency, and security, as well as reduce the burden of code review.
- Interactive website with a code editor, syntax highlighting, user authentication, and code review reports was designed and implemented for efficient debugging and code optimization.

FarmGuard Pro

- Built an efficient CNN architecture (ResNet) that was able to recognize more than 15 plant diseases with 94% accuracy.
- Built a Flask API deployed on Google Colab using ngrok tunnelling to offer real-time predictions to the frontend website.

Skin Disease Detection System

- Created a CNN-based deep learning model for automated 8 skin disease detection using dermoscopic images or skin lesions images.
- Preprocessed images, performed data augmentation, used transfer learning, and hyperparameter optimization for increasing the performance of the model.
- Created a Flask based web application where the user can upload an image and get a real-time disease prediction result.

Multi-Language Translator

- Created a desktop application in Python using Tkinter and Deep Translator library that could translate from English to Hindi, Chinese, Russian and German languages.
- Input validation, exception handling and language selection capabilities were incorporated into the software design, making it robust, accurate and easy to use.
- The NMT (Neural Machine Translation) services were integrated through third party APIs, providing an example of NLP (Natural Language Processing) application in software development.

Internship

IBM SkillsBuild Virtual Internship – Front-End Web Development

Edunet Foundation | Online | August 21, 2025 – September 30, 2025

- Created interactive and responsive web interfaces utilizing HTML5, CSS3, JavaScript, and Bootstrap.
- Used current front-end development methodologies to develop user-friendly and mobile-responsive web applications.
- Improved proficiency in UI design, web accessibility, and front-end application development projects through practical assignments.

Google Cloud Generative AI Virtual Internship

SmartBridge | SmartInternz | Online | July 14, 2025 – September 1, 2025

- Gain hands-on experience acquired in the use of Google Cloud Generative AI tools and the basics of LLMs.
- Creation of AI applications through the use of Python, prompt engineering, and Google Cloud AI.
- Exploration of the practical use cases of Generative AI.

Certifications

- IBM SkillsBuild Internship - Front-End Web Development - Edunet Foundation
- Data Structures and Algorithms in Java - Great Learning
- Robotics and Artificial Intelligence - Great Learning
- GenAI Apps with Gemini and Streamlit - Google
- Machine Learning with Python (V2) - Coursera
- Google Cloud Generative AI - SmartInternz
- Machine Learning Using Python - SkillUp

- Google IT Support Certificate - Google
- Data Science with Python - Finlatics
- Prompt Design in Vertex AI - Google
- Programming Basics - Great Learning
- Web Development Fundamentals - IBM
- Machine Learning with Python - IBM
- Python Essentials - VITyarthi
- Google IT Support Certificate
- Cloud Computing - NPTEL
- Internet of things(IOT) - NPTEL
- NISM Series 5A (Mutual Fund Distributors) - NISM

Achievements

- Ranked in the top 5% nationwide in SEBI National Financial Literacy Quiz (2024, 2025)
- Developed multiple AI and ML-based systems addressing real-world challenges
- Strong practical expertise in machine learning and deep learning through hands-on projects
- Completed multiple industry-recognized certifications in AI, ML, and Generative AI
- Demonstrated ability to independently learn and apply emerging technologies
